*suitable for:*

**EQUESTRIAN  
PLEASURE  
STUD  
SHOW &  
RACEHORSES**

## ✓ Durable

There are few materials that are as durable as recycled rubber tyres - they're almost indestructible, even by horses! The material used for the bases is also recycled, from heavy-duty industrial rubber belting.

## ✓ Safe

The soft rubber side walls of recycled car tyres are pliable and have no sharp edges. Ideal for feeding foals and young horses and those horses that are prone to injury, even in stables. All Capricorn bins have rubber-matted bottoms.

## ✓ Improves Horse Health

Made for ground level 'head down' feeding of all horses, mimicking the grazing position, these bins help increase chewing time before swallowing. This reduces feed particle size for improved digestion, increases salivation to reduce risk of stomach ulcers and drains the airways as horses feed.

## "Studies have shown that..."

horses can accumulate significant amounts of fluid in their lower airways when feeding at chest height. This can affect airway function and efficiency of oxygen uptake, reducing athletic performance. Feeding at ground level facilitates nasal and lower airway drainage to help clean the airways naturally as a horse feeds - a real advantage in racing and equestrian horses."

# Advantages at a Glance

**CAPRICORN**  
Feed Bins

**PLASTIC**  
Feed Bins

Long Life

Non Rot

can become brittle and break when exposed to UV light

Durability

Soft Rubber

No Sharp Edges

Pliable

rigid hard plastic

Safety

Uses Recycled Car Tyres

heat and chemicals required during manufacture

Green

Raised bin shown here without stable bedding for clarity

## Single Bin

**Large Sized Bin** is ideal for mares, stallions and racehorses, big eaters and feeding hay. **Small Sized Bin** ideal for foals, weanlings, ponies and miniatures.

## Raised Bin

Good for stables and outside yards. Reduces the risk of feed contamination with stable bedding and the feed bins being shifted or turned over.

## Square Base

Ideal for feeding hay and for big eaters. Its inherent stability makes it virtually impossible to turn over or roll away due to a horse being playful.

Capricorn has developed an innovative method to turn tyres inside out without damaging the naturally rounded edges. They have preferred tyre suppliers who supply only quality used tyres. All bins have rubber bottoms, with no sharp metal that can rust, bend or injure horses.
